Big Data

['big 'dā-tə]

Large, diverse sets of information that grow at ever-increasing rates.

Bigdata Analytics

Data is emerging as the world's newest resource for competitive advantage among nations, organizations and business.

1 Big data has few key characteristics such as volume, sources, velocity, variety and veracity.

2 Along with the volume, the number of sources, from where the data is extracted are also growing.

3 Data is increasingly accelerating the velocity at which it is created, as the process are moved from batch to a real time business.

4 The demands of the business from these data also has increased, from an answer next week to an answer in a minute.

BIG DATA

This flood of data is coming from many sources. Consider the following:

- The New York Stock Exchange generates about one terabyte of new trade data per day.
- Facebook hosts approximately 10 billion photos, taking up one petabyte of storage.
- Ancestry.com, the genealogy site, stores around 2.5 petabytes of data.
- The Internet Archive stores around 2 petabytes of data, and is growing at a rate of 20 terabytes per month.
- The Large Hadron Collider near Geneva, Switzerland, will produce about 15 petabytes of data per year.

INTRODUCTION

Big Data.

- Structured and Semi-Structured Data.
- Un Structured Data
- Statistical View of Big Data
- Big data in retail sector.
- ETL (Extraction Transformation Loading)

| Types of big data

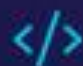

Structured

-  Standardized files
-  Web forms
-  Spreadsheets

Semi-structured or hybrid

-  XML language
-  NoSQL databases
-  HTML code

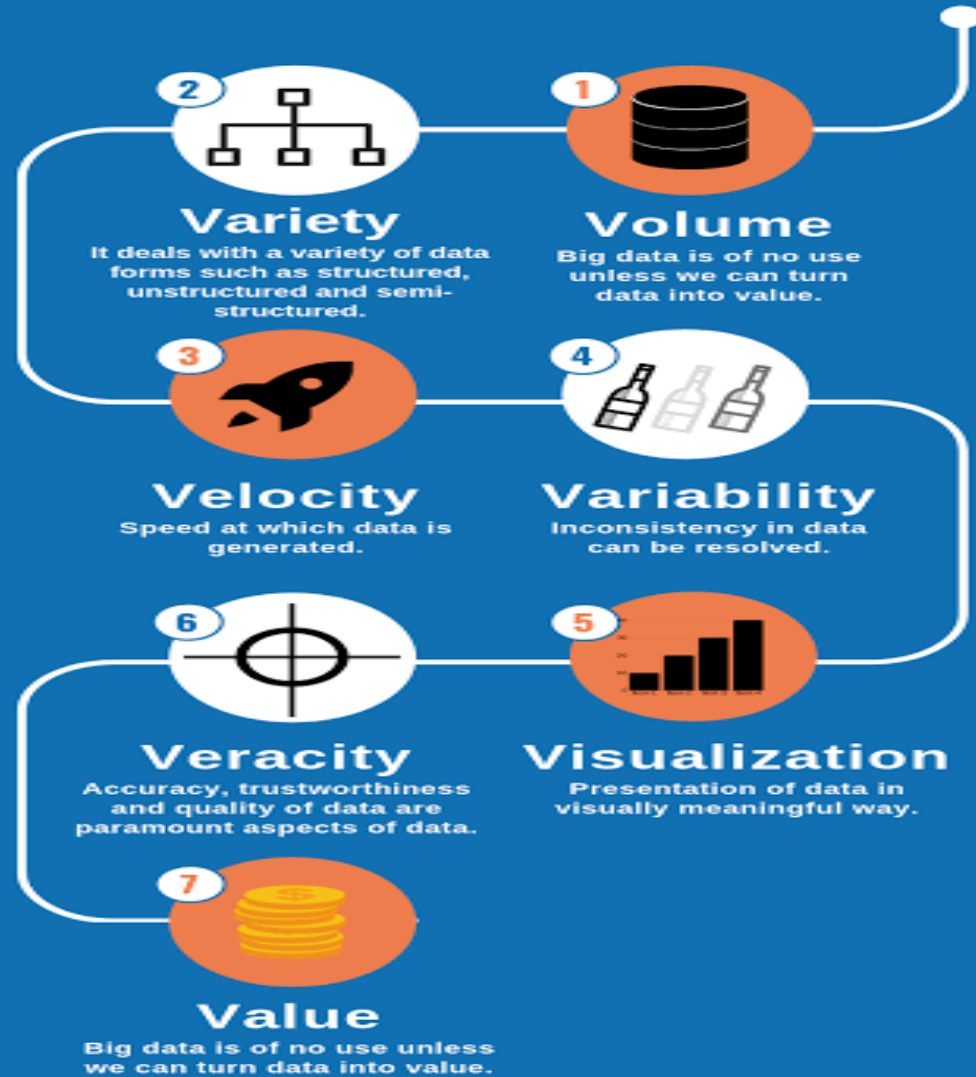

Unstructured

-  Audios
-  Images
-  Videos
