PF Lab 14

Topic: Two D Array / Double Pointer / Arrays with jagged edges

Question 1:

Write a function that asks the user to input the entries of a 5x5 array.

Write another function that sort each column into increasing/ascending order.

Print out the array with sorted columns.

Question 2:

Write a program that creates and initialize two d arrays of m rows and each rows have different number of columns input by user, and then perform the following task using functions:

1. Read any of the two rows numbers from user and tell if Both rows have same number of columns in it.
2. Read any of the two rows and check if both have same data in it in same order.
3. Read any of the two rows and check if both have same data / order may change.
4. Sort the last row of the array only.
